Phase2SubmissionDocument

Project:HousePricePrediction

Introduction:

- ✓ Therealestatemarketisoneofthemostdynamicandlucrativesectors, with house prices constantly fluctuating based on various factors such aslocation, size, amenities, and economic conditions. Accurately predictinghouse prices is crucial for both buyers and sellers, as it can help makeinformeddecisionsregardingbuying, selling, or investing in properties.
- ✓ Traditional linear regression models are often employed for house priceprediction. However, they may not capture complex relationships betweenpredictors and the target variable, leading to suboptimal predictions. Int his project, we will explore advanced regression techniques to enhance the accuracy and robustness of house price prediction models.
- ✓ Brieflyintroducetherealestatemarketandtheimportanceofaccuratehouse priceprediction. Highlight the limitations of traditional linearregressionmodelsin capturingcomplex relationships.
- ✓ EmphasizetheneedforadvancedregressiontechniqueslikeGradientBoo stingandXGBoostto enhancepredictionaccuracy.

ContentforProjectPhase2:

Consider exploring advanced regression techniques like Gradient Boosting or XGB oost for improved Prediction accuracy.

DataSource:

A good data source for house price prediction using machine learning should be Accurate, Complete, Covering the geographic area of interest, Accessible.

<u>DataCollectionandPreprocessing</u>:

- ✓ Importing the dataset: Obtain a comprehensive dataset containing relevantfeaturessuchassquarefootage,numberofbedrooms,location,amenities,etc.
- ✓ Datapreprocessing:Cleanthedatabyhandlingmissingvalues,outliers,andcateg oricalvariables.Standardize ornormalize numericalfeatures.

Exploratory DataAnalysis (EDA):

- ✓ Visualizeandanalyzethedatasettogaininsightsintotherelationshipsbetweenvariab les.
- ✓ Identifycorrelationsandpatternsthatcaninformfeatureselectionandengin eering.
- ✓ Presentvariousdatavisualizationstogaininsightsintothedataset.
- ✓ Explorecorrelations between features and the target variable (house prices).
- ✓ DiscussanysignificantfindingsfromtheEDAphasethatinformfeatureselect ion.

FeatureEngineering:

- ✓ Createnewfeaturesortransformexistingonestocapturevaluableinformation.
- ✓ Utilizedomainknowledgetoengineerfeaturesthatmayimpacthouseprices, such a sproximity toschools, transportation, or crimerates.
- ✓ Explaintheprocessofcreatingnewfeaturesortransformingexistingones.
- ✓ Showcasedomainspecificfeatureengineering, such as proximity scores or composite indicators.
- ✓ Emphasizetheimpactofengineeredfeaturesonmodelperformance.

AdvancedRegressionTechniques:

- ➤ RidgeRegression:IntroduceL2regularizationtomitigatemulticollinearityandover fitting.
- ➤ LassoRegression:EmployL1regularizationtoperformfeatureselectionandsimplifythemodel.
- ➤ ElasticNetRegression:

Combine both L1 and L2 regularization to be nefit from their respective advantages.

> RandomForestRegression:

Implementanensembletechniquetohandlenonlinearityandcapture complexrelationships in the data.

➤ GradientBoostingRegressors(e.g.,XGBoost,LightGBM):Utilizegradientboostingalgorithmsforimprovedaccuracy.

ModelEvaluationandSelection:

- Splitthedatasetintotrainingandtestingsets.
- $^{\circ}$ Evaluate models using appropriate metrics (e.g., Mean Absolute Error, Mean Squared Error, R-squared) to assess their performance.
- ${}^{\smallfrown} Use cross-validation techniques to tune hyperparameters and ensure model stability.$
- ${}^{\smallfrown} Compare the results with traditional linear regression models to highlight improvements.$
- Selectthebest-performing model for further analysis.

ModelInterpretability:

- ${}^{\frown} Explainhow to interpret \ feature importance from Gradient Boosting and XGBoost models.$
- CDiscuss the insights gained from feature importance analysis and their relevance to house price prediction.
- ^c InterpretfeatureimportancefromensemblemodelslikeRandomForestandGradientBoosting to understand the factors influencinghouseprices.

DeploymentandPrediction:

- $^{\smallfrown} Deploy the chosen regression model to predict house prices.$
- CDevelopauser-

friendly interface for users to input property features and receive price predictions.
